WearPads™

Wear Protection Panels

Features & Benefits

Wear-Con **WearPads™** Modular Wear Protection System is designed for large or small areas with severe impact and abrasion. They can be installed in the spots that get the big hits where other liners just don't seem to hold up. For example, right in the middle of a ceramic lining system or at a transition where material collides. Ease of installation and a variety of standard and custom sizes make **WearPads™** a quick and easy wear solution.

Installation

WearPads™ can easily be bolted or welded into place. The 5/8" diameter holes can be plug welded with 7018 low hydrogen welding rods and capped with 2865 hard surface overlay rod for extended wear life.

Technical Specifications

WearPads™ are available in a range of hardness options from 42 to 64 HRc, and with a maximum service temperature, up to 1000°F for standard options.

Sizes

WearPads™ are available in an array of sizes and thicknesses to fit your wear needs. **WearPads™** are designed to be interchangeable with Wear-Con's **WC90™ Weldable Ceramic Wear Tiles**, **WearPads™** are a great solution for small or large high-impact, high-wear areas.

WearPads Stock Sizes			
Thickness	Dimensions		
1/4"	2" x 6"	3" x 4"	4" x 6"
